Executive Overview

company name, founded by Deborah Boone in Seattle, provides a unique consignment experience for fabric and sewing supplies. For our capstone project under the Seattle University Computer Science department, our team has been tasked with developing a web app that will enhance user engagement with *company name*. The app will allow users to catalog and organize their own fabric and craft collections, connect with other fabric enthusiasts, and explore the variety of services offered by *company name*. This project will not only streamline inventory management for users but also foster a community around fabric and craft resources in the Seattle area.

Background

company name is a consignment fabric/ and craft material store located in Pike Place Market. The founder and main stakeholder, Deborah Boone, initially launched her business to celebrate and pass on the tradition of having a fabric stash. Deborah was inspired by her mentor's fabric stash which was sold to someone else after her mentor passed away. Her business, initially launched in Seattle in 2009 and now located in Pike Place Market since 2015, focuses on selling fabric through consignment to promote sustainability and skill preservation. She has been collaborating with Seattle University's Capstone teams for three years to develop an app aimed at helping users manage their fabric stashes.

The business operates with a strong focus on community and social awareness, with initiatives to support causes through sewing projects. Deborah's goal is not to focus on profit but rather on the organizational benefits the app can offer to fabric and craft enthusiasts.

Previous Capstone teams developed the inventory and design board features of the app, with a focus on documenting fabric collections and enabling users to plan out their projects. They created a photo upload feature so that users could take pictures of their fabric and view their personal stashes. They also added a link to the *company name* website to allow users to sell fabric to the company since they are a consignment store. The app is designed to prevent users from rebuying materials unnecessarily and helps organize personal fabric collections, keeping items out of the waste stream.

Opportunity

Why are we doing this?

Many fabric enthusiasts struggle with managing and organizing their growing collections, often losing track of what they own or buying duplicate materials. Without clear ideas on how to use these items, valuable fabrics can go unused, or even discarded. Additionally, customers frequently feel unsure about what projects to pursue, hindering their creative potential. Beyond organization, these individuals are seeking a community that inspires and supports them in crafting projects.

A major pain points that customers face is not knowing how they can use their fabrics. These customers also do not know what to create, we want to provide them with potential ideas, and projects. We aim to address these problems by offering an idea board, project suggestions, and a more robust calendar to encourage people to attend class. This will help guide customers to be creative and nurture a stronger community.

This project presents an opportunity to transform these frustrations into a richer, more empowering experience for users. By connecting them with practical tools and ideas, we can help customers make the most of their collections, spark new project ideas, and feel part of a creative community.

Guiding Principles

These Guiding Principles will be the framework for how we as a group will handle decisions or tackle upcoming roadblocks and obstacles, while also focusing on the goals of the project.

- **Communication:** Having effective communication between each other especially when it comes to due dates and milestones as well as having effective communication between the sponsor and ourselves whenever issues arise.
- **Accountability:** Every person on the team has a responsibility to contribute to the project. Holding ourselves and each other accountable when it comes to meeting project goals or milestones.
- **Flexibility:** Being flexible and willing to adjust to changes as they come up during the project, being understanding of everyone's different schedules, and being able to work around them.
- **Transparency:** Regularly sharing updates, being clear about individual progress or challenges, as well as providing access to resources or solutions which affect the entire group.
- **Making Decisions:** All team members are involved in the process, being able to explain the rationale behind decisions, being open to discussion of differing opinions, as well as encouraging input from others.

In/ Out of Scope

In-Scope:

- Create a section for customers to sell excess fabric to the shop.
- Create a section in the web app for video tutorials and guides to inspire users to find uses for excess fabric.
- Creating a calendar section:
 - Allows shop to add workshop type classes to the calendar.
 - Allows users to view and sign-up for classes to learn how to use their fabric stash.
 - Allows users to fill out an interest form for a class that they would like to see hosted.

Out-Of-Scope:

- Generative AI models
- Robust integration of payments for Fabric Stashes to be done through the app.
- Allowing users to ship out items themselves
 - Sponsor wants to maintain shipping standards

MVP Description

The MVP will be a functional, alpha-version web app that addresses core user needs and allows for testing within a small, controlled audience. This app will focus on delivering essential features to support fabric organization, community engagement, and project inspiration. Key features include:

1. **Basic Calendar and Event Sign-Up:** Users will have access to a calendar displaying upcoming classes and events, with simple sign-up options. They will also have access to fill out an interest form for a specific class. This will enable them to plan and participate in community activities, fostering learning and connection.
2. **Video Tutorials and Project Guides:** The app will offer an introductory selection of video tutorials and crafting guides, providing users with project ideas and teaching them how to make the most of their fabric collections.
3. **Basic Consignment Functionality:** Users will be able to list their materials for potential sale to *company name*, helping them downsize their collections and avoid waste.

For this alpha version, we will deploy a local, limited release to gather feedback on usability and functionality. The app will be built using Flutter for both Android and iOS compatibility and MongoDB for backend support, with an emphasis on a simple and intuitive interface tailored to *company name* user base. This MVP will allow us to validate core functionalities and refine based on user feedback.

Key Features:

Our solution's key features are designed to address user needs for organization, inspiration, and community within the MVP:

- **Personal Inventory Management**
 - Users can easily catalog and organize their fabric and craft items, helping them keep track of their collection, avoid duplicates, and get inspired by what they already own.
- **Design Board**
 - The design board enables users to create and save plans for future projects, helping them turn ideas into actionable projects while reducing material waste.
- **Accessibility and Cross-Platform Compatibility**
 - With a focus on both the App Store and Google Play, the app will be cross-platform and accessible on multiple devices to reach the broadest user base and ensure inclusivity.
- **Community Features**
 - The app fosters connection through a calendar that lets users view and sign up for community events and classes, fill out an interest form, a video tutorial section for guided learning, and potential future enhancements like user profiles and project sharing. Users will also have the option to connect with others in the *company name* community.

With a base app provided by last year's team, this year's project will focus on further developing these community-oriented features and optimizing the codebase for a smooth alpha testing experience. Our stretch goal includes preparing the app for broader release on the App Store and Google Play, pending feedback and testing results

Requirements

Functional Requirements:

Number	Requirement	Description
FR1	The system shall provide an idea board.	Users can use the idea board to view and explore creative ways to use their fabrics.
FR2	The system shall offer project suggestions.	The system will offer suggestions to users based on the fabric in their inventory.
FR3	The system shall allow users to categorize their fabric stash.	This will help the user track what they own to prevent them from buying duplicates.
FR4	The system shall integrate a calendar feature.	The calendar feature will allow users to view events, register for them, and send reminders for events as well as have an interest form functionality.
FR5	The system shall provide a forum where Deborah Boone's project ideas will be displayed.	Users can use this space to explore ways to use their fabric stash.

Non-Functional Requirements:

Number	Requirement	Description
NFR 1	The app and website shall have quick performance.	No stuttering and will load pages within 2 seconds.
NFR2	The system shall provide project guides.	Guides will show potential crafts the user can create.
NFR3	The fabric stash inventory shall use a secure database.	This will prevent any data leaks.
NFR4	The system shall support different versions of the app on any platform.	The most recent version of the app will be available on Google Chrome: 130 Mozilla Firefox: 130

		Microsoft Edge: 123 Apple Safari: 17.4 IOS 18 Android 14
NFR5	The calendar shall be interactive and accessible on any platform	The calendar will be available on Google Chrome: 130 Mozilla Firefox: 130 Microsoft Edge: 123 Apple Safari: 17.4 IOS 18 Android 14
